

WAVING HANDSAW & RASPING VACUUM

NO RUSP AND CUT DIRT

✓ CLEAN BUILDING SITE

✓ MINIMAL WASTE

✓ LESS DUST

✓ TIME-SAVING

✓ LOWER CLEANING COSTS

- Specially developed for cutting insulation material without a problem: EPS, XPS, mineral wool.
- The handsaw has a wave formed sharpened edge that allows it to slice through the material creating minimal waste.
- The insulation handsaw has been tested on all sorts of insulation materials giving excellent finishing with low friction and creates less sawdust.
- The sleeve is impregnated with a Volatile Corrosion Inhibitor that will protect the saw from corrosion.
- Thanks to its long 22" saw blade it can cut through thick piles of insulation wool, while also cutting straighter than other replacement products, like knives.

- Ideal façade surface – vacuum smoothens EPS.
- Reduced base coat and render coverage (even façade surface).
- Prevents micro cracking of the façade surface which leads to water penetration.
